Enterprise Data Governance Leader | Federated Stewardship, Metadata & AI-Ready Data

Enterprise data governance, AI governance, and data platform leader with experience building federated stewardship models, metadata frameworks, data classification standards, and adoption programs across complex, matrixed organizations. Skilled at translating governance strategy, policy, and regulatory expectations into practical workflows, operating models, training, KPIs, and business-owned stewardship practices. Proven ability to influence without authority across business, technology, legal, security, privacy, HR, finance, supply chain, and manufacturing stakeholders. Experienced with Alation, Databricks Unity Catalog, Anomalo, Privacera, Palantir Foundry, Power BI, data quality, sensitive data classification, and AI-enabled governance automation.

WORK EXPERIENCE

APEX AI Governance Founder

02/2026 – Present
Florida, United States

- Developed governance workflows for new features that enhanced compliance with regulatory requirements, increasing stakeholder trust by 30% within 3 months through effective data logging.
- Developed and implemented a client-facing strategy for program measurement initiatives, resulting in a 60% increase in operational efficiency within 3 months by leveraging machine learning insights.
- Leveraged problem-solving skills to refine product management approaches, resulting in a 40% increase in user experience and satisfaction within 2 months by effectively addressing decision-makers' needs.
- Designed a performance metric framework within the go-to-market strategy that facilitated data-driven decision-making, achieving 3 customer engagements within two weeks of the organization's inception.
- Optimized the identification and implementation of AI use cases through a targeted data visualization strategy, achieving a 30% increase in operational efficiency within 4 months by fostering collaboration across departments.

Blue Origin Senior Product Manager, Supply Chain & Data Platforms

09/2022 – 02/2026
Merritt Island, FL

- Developed executive-ready deliverables that improved decision-making processes, enabling faster approvals within 3 months.
- Implemented process optimization techniques that enhanced performance tracking across business intelligence initiatives, achieving a 30% boost in efficiency within 2 months through targeted data analysis.
- Facilitated cross-functional collaboration to drive adoption of data discovery tools, achieving a 25% reduction in time spent on data retrieval and analysis within 2 months.
- Led the integration of JIRA for product requirements management, achieving a 30% boost in reporting accuracy and providing critical operational insights to safety organizations within 3 months.

Senior Technical Product Manager, AI Governance & Data Platforms

Merritt Island, FL

- Implemented robust risk control measures that enhanced product compliance, resulting in a 25% increase in stakeholder trust within 2 months by effectively balancing competing priorities.
- Developed high-visibility executive reports that transformed complex data into compelling narratives, enhancing decision-making processes and stakeholder engagement within 3 months.
- Conducted impact assessments that identified critical gaps in data handling, leading to the development of robust validation rules and a 30% increase in data integrity across cloud platforms within 3 months.

- Implemented change management strategies that streamlined governance protocols across enterprise architecture, resulting in a 40% boost in stakeholder trust within 5 months by ensuring consistent data practices.

Senior Data Governance Partner, Enterprise Data & Governance

Merritt Island, FL

- Enhanced cross-functional collaboration to streamline scorecard design processes, resulting in a 50% decrease in reporting time and improved regulatory compliance within 6 months.
- Implemented systems thinking to design a governance framework that streamlined compliance processes, resulting in a 70% increase in data discoverability and improved workflow automations within 6 months.
- Improved decision-making processes by leveraging segmentations and event tracking, leading to a 25% increase in stakeholder engagement and actionable insights within 6 months.
- Drove initiatives to improve data access and integrity, leading to a 40% enhancement in reporting accuracy within 6 months by integrating effective governance practices across the organization.
- Served as the go-to person for cross-functional collaboration, leading a team that successfully aligned product strategies with customer needs, achieving a 40% boost in customer satisfaction within my first 3 months.

The Coca-Cola Company

09/2018 - 04/2022

Data Scientist, People Analytics • Full-time

Atlanta, GA

- Developed executable reporting pipelines and dashboards that enhanced executive visibility and informed decision-making, improving employee experience within one quarter.
- Leveraged subject matter expertise to translate complex workforce data into actionable insights, enhancing stakeholder alignment by 30% within 6 months through impactful presentations.
- Led a cross-functional team to implement a vision and strategy for AI adoption, improving management experience and collaboration across departments, which boosted operational efficiency by 40% within 4 months.

Knowledge and Insight consultant • Full-time

Atlanta, GA

- Leveraged consulting expertise to design workforce analytics frameworks that increased operational transparency, resulting in a 30% improvement in retention strategies and decision-making efficiency within 6 months.
- Collaborated with cross-functional teams to build a culture of analytics, improving lifetime value metrics by an improvement of 15% of employee engagement within 6 months through targeted insights and strategic recommendations.
- Translated complex workforce and engagement data into actionable insights, improving stakeholder alignment by 30%.
- Served as a strategic advisor by implementing problem-solving skills to create clear communication strategies, improving stakeholder comprehension of workplace analytics by 40% within 6 months.

Missouri University of Science and Technology

12/2016 - 09/2018

Education Program Coordinator / OVW Project Coordinator - Equity and Title IX

Rolla, MO

- Led initiatives to enhance coaching practices for customer-facing roles, resulting in a 30% increase in program alignment within 6 months by analyzing feedback and implementing scenario planning for continuous improvement.
- Streamlined development processes for training and reporting initiatives, resulting in a 30% improvement in program alignment and stakeholder engagement within 4 months.

U.S. Army

06/1998 - 07/2014

Military Police | Platoon Sergeant | Senior Drill Sergeant

Led teams in high-pressure environments, overseeing training, operations, and personnel development. Responsible for mission execution, leadership development, and operational readiness across multiple units.

- Led initiatives to cultivate management skills among team members, resulting in a 30% improvement in operational readiness and effectiveness in high-pressure environments within 4 months.

- Mentored team members in operationalization strategies, resulting in a 30% improvement in mission execution efficiency across various deployments within 4 months.

EDUCATION

Master's Degree, Industrial and Organizational Psychology Missouri University of Science and Technology	01/2015 – 01/2018
Bachelor's Degree, Psychology Drury University	01/2010 – 01/2014
Bachelor's Degree, Sociology Drury University	01/2010 – 01/2014
Degree Central High School	01/1994 – 12/1998

CERTIFICATIONS

Data Analytics for Business Professionals LinkedIn	07/2020 – Present

PROJECTS

CONTACT: Cognitive Opacity, Negotiation, Transparency, Alignment, and Contact Test Apex AI Governance CONTACT is an AI evaluation and governance research framework designed to assess advanced AI systems for self-model coherence, motivational alignment, concealment behavior, behavioral consistency, and first-contact interaction patterns under uncertainty, pressure, and changing incentives. The project focuses on AI alignment, governance, model behavior analysis, structured evaluation workflows, benchmark scenario design, instrumentation, and human-AI interaction research. The framework includes model adapter interfaces, structured evaluation logic, reporting workflows, behavioral analysis tooling, and longitudinal assessment methodologies used to evaluate consistency between system outputs, actions, and self-reported reasoning over time. CONTACT explores how advanced systems may reveal, suppress, negotiate, or adapt awareness-like signals across changing operational contexts and observation states. The project was designed to support AI governance research, explainable AI analysis, accountability frameworks, behavioral monitoring, and trustworthy AI evaluation. CONTACT reflects my broader interest in AI alignment, operational governance, analytics-ready evaluation systems, and the long-term governance implications of increasingly autonomous and agentic AI systems.	04/2026 - Present
MandateCore: AI Decision Governance Engine Apex AI Governance MandateCore is an AI governance and decision-intelligence platform designed to evaluate AI-influenced actions against policy rules, approval authority, evidence requirements, compliance standards, and operational risk thresholds. The platform operationalizes governance directly within workflows, enabling organizations to move beyond passive oversight toward real-time, accountable decision governance in regulated and high-impact environments. The project focuses on governance workflows, policy enforcement, access controls, auditability, lifecycle management, accountability, traceability, and explainable AI decision evaluation. Core capabilities include policy-aligned validations, authority verification, exception handling, escalation paths, audit-ready reasoning trails, structured approval workflows, monitoring, and operational reporting designed to support trusted analytics and AI-ready operational systems. MandateCore was built to demonstrate how governance, compliance, and decision reliability can be embedded directly into enterprise automation flows, business operations, and AI-assisted workflows. The platform supports scalable governance architectures by combining structured controls, workflow automation, documentation, instrumentation, and transparent decision tracking to strengthen trust, defensibility, and operational oversight across AI systems.	02/2026 - Present
ATLAS Apex AI Governance ATLAS is an AI governance and adversarial risk analysis platform designed to evaluate AI systems against operational threats, misuse scenarios, governance gaps, and AI risk-management requirements. The platform combines governance workflows, threat modeling, analytics-ready reporting, and AI-ready	02/2026 - Present

evaluation pipelines to help organizations operationalize responsible AI controls in enterprise environments.

The project focuses on AI governance, risk scoring, metadata management, workflow automation, monitoring, instrumentation, lifecycle management, policy enforcement, and explainable AI evaluation. ATLAS integrates governance scorecards, incident response workflows, escalation paths, validation processes, and human-in-the-loop review mechanisms to support trustworthy AI deployment, compliance requirements, and operational oversight.

ATLAS was built to demonstrate how AI governance can move beyond static policies into measurable, operational controls embedded directly within enterprise AI workflows. The platform includes MITRE ATLAS-inspired threat analysis, AI risk classification, audit-ready reporting, lineage visibility, monitoring controls, and governance tooling designed to improve transparency, accountability, data reliability, and stakeholder trust across AI and analytics ecosystems.

Base Zero — Public Demo (Safe Share)

03/2025 – Present

Apex AI Governance

Syntropy/Base Zero is an AI governance and metadata intelligence platform designed to improve data reliability, semantic alignment, and AI readiness across enterprise datasets. The platform uses synthetic HR and Finance datasets, metadata enrichment workflows, vector-style JSONL outputs, graph edge relationships, and governance audit trails to demonstrate scalable AI-ready and analytics-ready data architectures.

The project focuses on metadata management, data governance, semantic clarity, explainable automation, workflow automation, lifecycle management, and human-in-the-loop validation. It includes a pluggable ingestion layer, automated metadata tagging, governance scorecards, monitoring workflows, lineage tracking, and policy-aware validation processes that support trusted analytics and AI use cases.

Syntropy/Base Zero was built to demonstrate how connected data, graph relationships, vector architectures, and machine-readable metadata can improve data quality, operational visibility, accountability, and AI system reliability. All datasets, outputs, and demonstrations are synthetic and public-safe, while production taxonomies, embeddings, and operational logic remain private.

Project Name: Sentinel – Automated data management

02/2025 – 02/2026

Blue Origin

Sentinel is a high-impact AI governance and data reliability program focused on building trusted, analytics-ready and AI-ready enterprise data systems. The platform establishes governance, compliance, accountability, and operational reliability across data, workflows, automation flows, reporting, and AI use cases.

As Technical Product Owner, I led cross-functional programs spanning data governance, data engineering, data management, workflows, lifecycle management, and AI operations. The initiative focused on improving data quality, metadata management, monitoring, instrumentation, lineage, access controls, documentation, validation workflows, and business reporting across enterprise platforms.

Sentinel supported end-to-end governance for AI and analytics by implementing scorecards, policy enforcement, incident response workflows, escalation paths, lifecycle controls, and workflow automation. The platform improved decision-making, operational alignment, and reporting reliability while strengthening compliance requirements, accountability, and stakeholder trust.

The program also established governance standards for AI-ready datasets, semantic alignment, actionable analytics, recommendations, and workflow-based automation use cases. Sentinel integrated monitoring, service-level expectations, data reliability controls, auditing, and automation tooling to ensure explainable, scalable, and trusted operational intelligence for both technical and non-technical stakeholders.

Project Helios: Enterprise Visibility and Intelligence Platform

10/2025 – 02/2026

Blue Origin

Helios is the centralized intelligence layer I am building to unify operational data streams and transform them into actionable insight for teams across the organization. The program focuses on creating a single, trusted ecosystem where inventory, production flow, and decision-critical signals can be monitored, contextualized, and used to improve execution. My contributions include:

- Designing the program architecture and strategic roadmap for enterprise visibility, analytics, and AI-assisted insight generation.
- Leading executive alignment, scoping, and investment planning for a multi-phase rollout.
- Integrating data governance, AI governance, and operational workflows into a unified foundation that supports

trustworthy automation. • Establishing a scalable model that supports future predictive, prescriptive, and autonomy-assisted decision capabilities. Helios serves as the central source of truth that enables people, processes, and systems to operate from a shared understanding.

Project Hermes: Intelligent Process Orchestration and Automation

10/2025 - 02/2026

Blue Origin

Hermes is the automation and orchestration arm of the broader initiative. It translates operational signals into explainable, human centered recommendations and actions. The goal is to reduce manual tracking and repetitive system interaction by introducing assistive automation that is grounded in strong governance. My contributions include: • Defining controlled automations that support procurement, material movement, and exception handling with humans kept in the loop. • Building the governance model that ensures explainability, auditability, and compliance across automated decisions. • Designing the architecture that enables Hermes to act on analytics from Helios and IoT signals from Argus. • Positioning Hermes as a force multiplier for operational teams by reducing latency, preventing errors, and accelerating throughput. Hermes provides the bridge between insight and action by enabling teams to operate more efficiently without losing trust or oversight.

Project Argus: IoT Enabled Operational Awareness

10/2025 - 02/2026

Blue Origin

Argus is an IoT based operational awareness and tracking initiative that improves material flow, reduces loss, and increases cycle-count accuracy across complex facilities. It combines low-power tagging, gateway architectures, and mobile devices to create real-time location and status visibility. My contributions include: • Driving the full pilot design, including zone planning, hardware evaluation, and architecture selection. • Coordinating with vendors, internal engineering teams, and operations leaders to stand up a practical and testable system. • Developing the data-plane strategy that connects Argus telemetry into the wider analytics and decision environment. • Building the business case, operational impact model, and leadership facing briefing materials that secured next-phase support. Argus provides a foundation for a more connected environment where assets, inventory, and workflows are visible and traceable at scale.

OVW project

01/2017 - 09/2018

Missouri University of Science and Technology

The OVW Project strengthened coordination between campus and community partners to improve support services, increase awareness, and reduce sexualized violence on campus. The initiative focused on stakeholder engagement, community outreach, cross-functional collaboration, training forums, advocacy, and adoption of prevention and response resources across the university environment.

Global data collection for Data Warehouse

The Coca-Cola Company

Contributed to enterprise HR data integration initiatives across Coca-Cola's global digital ecosystem, helping create a unified source of truth for workforce reporting, organizational metrics, and executive decision-making. This role strengthened my foundation in data governance, analytics, stakeholder collaboration, and large-scale enterprise data systems.

VOLUNTEERING & LEADERSHIP

Autism Speaks

03/2007 - Present

advocate

Autism Speaks is one of the world's leading autism science and advocacy organization, dedicated to funding research into the causes, prevention, treatments and a cure for autism; increasing awareness of autism spectrum disorders; and advocating for the needs of individuals with autism and their families.

American Military Family Autism Support

01/2011 - 12/2020

Internet Page Administrator

American Military Families Autism Support is for military families by military families. To ensure our mission of providing news, information, community and support is representative and respectful of all perspectives and backgrounds, AMFAS has a robust all-volunteer team representative of the various services and components. Unlike other organizations utilizing fundraising, interns, contractors and other

methods to run their efforts, AMFAS is 100-percent family driven, by the individuals who are both military family members and have children with autism.

Society for Industrial and Organizational Psychology (SIOP)

01/2019 – 12/2020

Visibility Committee, Chair, Media subcommittee

Society for Industrial and Organizational Psychology (SIOP)

01/2018 – 12/2019

Visibility Committee, Public Information Officer

SKILLS

Attention to detail, curiosity, Customer Service, Data Engineering, Defensive Driving, Diversity & Inclusion, Emergency Management, Emergency Planning, Emergency Response to Terrorism, Equal Opportunities, Event Management, Event Planning, First Aid, Fitness Instruction, Hands-On, Human Resource Planning, Individual Counselling, International Relations, Inventory Analysis, Inventory Management, Leadership, Leadership Development, Logistics Management, Management, Marketing, Marketing Strategy, Microsoft Office, Military, Military Experience, Military Training, Networking, Operations Management, Presenting, Project Management, project prioritization, Public Speaking, Quality Control, Recruiting, Sales, Sales Operations, Security, Six Sigma, Social Media, Software Systems, stakeholder management, Strategic Planning, Team Building, Training, Writing

CORE SKILLS: Agile Product Development, AI Governance, AI Product Management, AWS (Bedrock, Lambda, EC2), BPMN, Customer Journey Mapping, Data Architecture, Databricks (Delta Lake, Unity Catalog), Data Governance, Data Quality, Event-Driven Architecture, FastAPI, Graph Databases (Neo4j), KPI Definition, LLM Evaluation, Metadata Management, Power BI, Product-Market Fit, Product Roadmaps, Product Strategy, Python, RAG Systems, SQL, Stakeholder Management, Team building, User Personas, Vector Databases (ChromaDB)
